

Dataset Key Columns

Key	Type	Paraphrased Description	Description
ListingId	String	Identifier of listing meant for human retrieval (may not be unique in a multiple originating/merged system)	The well known identifier for the listing. The value may be identical to that of the Listing Key, but the Listing ID is intended to be the value used by a human to retrieve the information about a specific listing. In a multiple originating system or a merged system, this value may not be unique and may require the use of the provider system to create a synthetic unique value.
ListingKey	String	Unique identifier of listing. Can include a URI or other forms. Uses local key of the system.	A unique identifier for this record from the immediate source. This is a string that can include a Uniform Resource Identifier (URI) or other forms. This is the local key of the system. When records are received from other systems, a local key is commonly applied. If conveying the original keys from the source or originating systems, see SourceSystemKey and OriginatingSystemKey.
ModificationTimestamp	DateTimeOffset	Timestamp of the last time listing was last modified	The transactional timestamp automatically recorded by the MLS system representing the date/time the listing was last modified.
PhotosChangeTimestamp	DateTimeOffset	Timestamp of when the last update/change to listing photos were made	System generated timestamp of when the last update or change to the photos for this listing was made.
PhotosCount	Int32	Total number of photos in the listing	The total number of pictures or photos included with the listing.

Key	Type	Paraphrased Description	Description
PostalCode	String	Postal code of street or mailing address	The postal code portion of a street or mailing address.
StandardStatus	StandardStatus Enum	Enum reflecting important stats pertaining to listing agent and seller contract, including: - Active - Active under contract - Canceled - Closed - Expired - Pending - Withdrawn	The status of the listing as it reflects the state of the contract between the listing agent and seller or an agreement with a buyer (Active, Active Under Contract, Canceled, Closed, Expired, Pending, Withdrawn). This is a Single Select field.

Enums

StandardStatus Enum:

StandardStatus

Name	Value	Description
StandardStatus	Active	The listing is on market and an offer has not been accepted.
StandardStatus	ActiveUnderContract	An offer has been accepted but the listing is still on market.
StandardStatus	Canceled	The listing contract has been terminated.
StandardStatus	Closed	The purchase agreement has been fulfilled or the lease agreement has been executed.
StandardStatus	ComingSoon	This is a listing that has not yet been on market but will be on market soon. A listing contract has been executed. Some systems may use Hold or Withdrawn for similar purposes. When all three are in use, Hold expresses a listing that may have been on market but is off market temporarily and is expected to return to market. Withdrawn may have been on market but when used in conjunction with Hold, is not expected to return to market. Coming Soon is different from Hold and Withdrawn as the property, under the current listing contract only, has not been previously on market.
StandardStatus	Delete	The listing contract was never valid or other reason for the contract to be nullified.
StandardStatus	Expired	The listing contract has expired.
StandardStatus	Hold	A contract exists between the seller and the listing member. The listing may be completely off market, not allowing any showings and/or not taking any further offers. For systems that don't use Hold, Withdrawn is a similar status that may be in use. When both Hold and Withdrawn are in use, Withdrawn may be used to indicate a greater certainty that the listing will not come back on market.
StandardStatus	Incomplete	The listing has not yet be completely entered and is not yet published in the MLS.
StandardStatus	Pending	An offer has been accepted and the listing is no longer on market.
StandardStatus	Withdrawn	The listing has been withdrawn from the market, but a contract still exists between the seller and the listing member. For those systems that use both Hold and Withdrawn, Withdrawn may represent an intention not to bring the listing back on the market. When Hold is not used by the system, Withdrawn does not represent any intention of returning to market or not.
